

MANITOBA CHIMNEY SWIFT INITIATIVE ROOST AND NEST SITE DATABASE 2023																
Last modified:	01-11-2023															
See MCSI website for database from 2014-2019 (http://www.mbchimneyswift.com/Documents/2014_sites.pdf).																
Dataset was updated in Feb 2022 to remove candidate chimneys with no confirmed swift use. Candidate site information is now stored in a separate database at MCSI.																
TYPE is roost (R) or nest (N) site; roost sites are used during the roosting hour = 1/2 hour before to 1/2 hour after sunset, when chimney swifts enter to rest for the night (early/late entries are possible; exits are made rarely) - chimney swifts leave the site the following morning within 1/2 h of sunup; nest sites are used during the daytime also i.e., entry/exit activity is seen outside of the roosting hour.																
S/F = successful fledging (S) or failed nesting attempt (F) at a nest site.																
TYPE and nest S/F designations may be blank or ? if insufficient information is available to categorize the site. Roost sites leave blank.																
MAX is the peak number of swifts seen entering/exiting the site during the season. Use first occurrence of min using chimney from database.																
DATE OF MAX is the date on which the peak number of swifts seen entering/exiting the site occurs. Date of first peak occurrence if peak happens multiple times over season.																
If a site has 0 entries/exits leave TYPE and S/F blank.																
Greyed-out lines indicate chimney is demolished or no longer suitable for Chimney Swifts in some way (such as capped)
